

# SAP Solutions

## SAP High Performance Analytic Appliance (HANA)

Do you have large data volumes that you can't analysis; does this stop you making real time decision to improve your business?

**What is HANA?**

- SAP HANA is the next generation of SAP's in-memory computing technology
- SAP HANA is a multi-purpose, data-source agnostic, in memory appliance
- The HANA appliance combines SAP software components optimised on hardware provided and delivered by SAP's leading hardware partners

**SAP HANA enables business users to:**

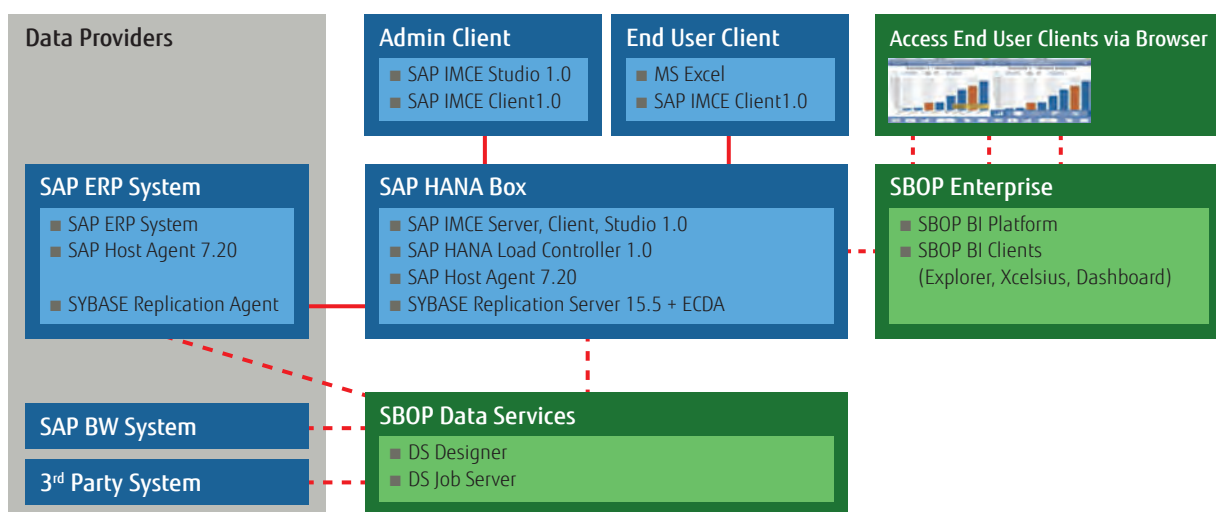

- combine the speed and efficiency of in-memory processing with the ability to analyse massive amounts of data
- break down the boundaries between real-time events and real-time business decisions

**Why HANA?**

Do you have performance issues with your current reporting environment?

The Diagram below describes the SAP HANA landscape

**SAP HANA 1.0: Landscape**

IMCE = SAP In-Memory Computing Engine    SBOP = SAP BusinessObjects Portfolio

## How does Fujitsu Implement SAP HANA?

Fujitsu has defined an implementation approach for SAP HANA that includes hardware, software, data services and data analytics. The diagram below shows the steps in this process.

### Customer Briefing

We discuss how your business can benefit from SAP HANA and discuss the details of an implementation.

### Solution Concept

During Solution Concept we work with you to design the business scenarios and reporting requirements, we can also analyse your corporate requirements and advise how SAP HANA fits into your enterprise Business Intelligence Strategy.

We define the source data and size the hardware based on data volumes.

We discuss how SAP HANA fits into your current and future IT landscape, including data centre requirements and network integration.

### Solution Specification

We specify the data marts and the data modeling required for your reporting needs. We suggest the most suitable reporting tools available in BusinessObjects.

We work with you to document the technical landscape including integration to your data centre, network and data sources.

### Solution Implementation

The HANA appliance is configured to fit into your landscape, the hardware components are assembled and tested. The hardware is delivered to your data centre.

### Solution Integration

We integrate the HANA appliance into your landscape and run hardware tests.

We work with you to load the data sets and build the data models, combining data from different sources and define the analysis. Together we design and build the reports, dashboards and analytics in BusinessObjects to help you make better real time decisions.

### Solution Support

With you we can create a Fujitsu support agreement to manage your HANA solution into the future.

### Why Fujitsu?

- One stop approach to hardware, development and hosting services
- Sybase Partner
- Certified Global SAP technology partner
- Leverage proven experience with Mobility Implementations
- Local presence
- Local and Global Support
